

Data Center

By S.M. Durraraj Hossain (IT Professional)
durrarajit@yahoo.com

The department in an enterprise that houses and maintains back-end information technology (IT) systems and data stores - its mainframes, servers, and databases. In the days of large, centralized IT operations, this department and all the systems resided in one physical place, hence the name data center. With today's more distributed computing methods, single data center sites are still common, but are becoming less so. The term continues to be used to refer to the department that has responsibility for these systems, no matter how dispersed they are.

Companies can keep the racks of Computer Servers that drive their e-activities. It Allows several customers to share a single server owned and provide it for multiple network connections.

Data Centres are a part of a general trend towards outsourcing, particularly for small and medium size business. Using a Data Centre leaves businesses free to concentrate on developing the business.

Company can now put more focus on the applications side. It also helps by Providing a full range of customized services monitoring clients internet traffic. Solving technical problems keeping web sites running constantly and provide highest quality speed. 24 x 7 x 365 support and expert on-site technicians.

Centers provide outsource capabilities for the management and day-to-day operations of your Web sites or other IP connected applications. You can enjoy the benefit of colocation by renting Rack Space, a Half or a Full Cabinet. Aplus.Net™ offers businesses a secure environment to physically house your equipment—a secured cabinet with regulated power, dedicated internet connection, security, and excellent customer service.
